

FLAVEL

Makes anywhere feel like home

G A S F I R E S 2 0 0 9

What could be more reassuring than the knowledge that your gas fire comes from a long standing leader in home heating. Flavel.

Flavel gas fires are renowned for high heat output across one of the largest choices of styles and features in the UK. From contemporary to traditional, slimline to full depth, and with coal, pebble and driftwood options on our inset gas fire models. The Flavel range also includes many outset and wall mounted gas fires, with powerflue and balanced flue models for homes without chimney applications.

There is also the peace of mind of a 3 year guarantee on every model, and the reassurance of the Flavel Airwatch System on all living flame effect fires. This device immediately cuts off the gas supply in the unlikely event of the flame being extinguished through blockage.

Helping you make the right decision

A fireplace is one of the most important purchases you will make for your home. It is the main feature in your living area so it must look stunning and also suit your practical needs.

Some gas fires will only fit certain chimneys or flues so, before you choose a new fire check the chimney and flue in your home. The guide on page 6 will help you identify which type of chimney or flue you have. With this in mind, when you browse through this brochure the symbols on each product page will make it clear which fires will correspond to your requirements.

Take a look too at the control symbols on page 4 so that again, before you begin, you can select the control that will suit your lifestyle. Some controls are more easily accessible than others; for example a slide control is easy to use and reduces the need to bend when turning the fire on and off. Whilst for the ultimate in luxury, a remote control option means you can control your fire without leaving your seat.

Makes anywhere feel like home

What's your type?

Living Flame Effect pages 6-32

A Living Flame Effect fire (LFE) has real-flame appeal and is available in two types:

LFE Convector

A convector fire draws cold air in and sends it back out as hot air, maximising heat output whilst keeping your fuel bills down.

LFE Radiant

This type of LFE fire radiates heat from the combustion chamber only – which is why Flavel incorporate a glowing back panel to maximise heat output.

Radiant pages 33 - 41

The Flavel radiant fires incorporate glowing radiants and can run on as little as 6.4p per hour on the maximum setting.

What's your style?

highefficiency

Warm your home efficiently & beautifully.
Our high efficiency fires use less energy, so
you can save on those fuel bills!

Pages 6 - 11

Guide to Symbols

Type of Chimney or Flue

The type of chimney or flue you have dictates the type of fire you can have. But if you're not sure, then take a look at your roof and compare it with the simple guide below.

It's worth remembering that a full depth fire often requires a traditional chimney or rebate on the fire surround, whilst a slimline fire will fit virtually any chimney or flue.

Brick Chimney

Apart from products designed for "no chimney" applications, all Flavel products will fit brick chimneys.

They are easily recognisable by a chimney stack with accompanying terracotta pot or gas terminal.

Pre-Fabricated Flue

Pre-fabricated flues are easily identifiable by a metal flue and terminal on the roof and a metal flue box behind the fire.

Pre-Cast Flue

Pre-cast flues can be identified by a ridge vent or metal flue tube and terminal on the roof.

Constructed from concrete or clay blocks they form a rectangular section flue. All Flavel fires featuring this icon are only suitable for Pre-Cast flues conforming to BS EN 1858.

Can't see a Chimney or Flue?

If you can't see a chimney or flue like the ones described above, then you will require either a Balanced Flue, a Powerflue or an electric fire.

Powerflue

Powerflue fires use an electronically driven fan unit mounted on the external wall to expel the flue gases directly outside the building.

Balanced Flue

Balanced Flue fires use a horizontal pipe to vent directly outside. An electricity supply is not required for Balanced Flue products.

Controls

Manual Control

Simple and discreet

Top Control

Twist ignition and control means you don't have to bend down

Slide Control

Convenient control that eliminates the necessity of bending down

Remote Control

Control your fire without leaving your seat

Power Supply

Your gas supply will either be natural gas or LPG, depending on the area in which you live.

Natural Gas

You are most likely to have this gas supply

LPG

LPG is the most popular alternative to natural gas

Get up to 89% net efficiency from your gas fire...

Flavel has always had a reputation as a manufacturer of some of the most efficient fires on the market. Now we have set new industry standards with the introduction of the Flavel HE high efficiency range: exceptional heat output combined with lower running costs compared to standard gas fires.

Flavel's R&D team has invested in developing the technology to meet the key objective of producing gas fires that save energy and as a result, help to keep costs down.

Please confirm your flue type by consulting your Flavel stockist before purchase.

Please note that the dimensions on the diagrams are intended as a guide only. For the exact dimensions, please consult the latest issue of the manufacturer's installation instructions.

N.B. If required, more detailed technical specification information is available from your Flavel stockist.

Flavel recommends that all gas appliances should be serviced annually by a Gas Safe Registered engineer to ensure continued safe operation and optimum performance throughout the lifetime of the product. This is in line with good gas industry practice.

Please refer to installation guides for exact dimensions. BFM Europe cannot be held responsible for any building work undertaken prior to purchasing your fire. For more information you can download installation manuals for any Flavel product from our website – www.bfm-europe.com

In addition to producing fires that not only look fantastic, and are highly efficient, one of Flavel's key objectives is to make life as simple and hassle free as possible for the Installer.

Many time-saving features have been designed into the manufacturing process. As a result we are confident that once an Installer has fitted a Flavel fire they will not want to fit anything else!

1 Fixing wire kit

Flavel fires come with a fixing kit containing wire and fixing eyes that eliminate the need to drill the back panel

2 Accessible gas connection

The gas connection on Flavel insets is located front left of the control panel for easy access

3 Flange seal

Flavel's foam seal eliminates the requirement of sealing the fire box to the back panel

4 Step by step Installation instructions

Comprehensive yet easy to understand installation instructions are downloadable at www.gas-fires.co.uk

5 Pre-cut gas entry points

Numerous pre-cut flaps in the metal fire box allow the installer to bring in the gas pipe at the most suitable point

6 Easy burner assembly removal

The burner can be removed as a complete assembly, enabling easier installation and servicing

7 Restrictor elbow included

Flavel fires come with a restrictor elbow to isolate the gas supply. These are located at the front left of the control panel for ease of access

WARNING: BFM Europe Limited is a Gas Safe Registered company. We recommend that all of our fires are installed by Gas Safe Registered engineers in accordance with our instructions.

DISCLAIMER: Our policy is one of constant development and improvement. We therefore reserve the right to revise designs and specifications of our gas fires and other products without formal notice, patents pending. BFM Europe Limited has taken every care in the preparation of information contained in this brochure, but we accept no liability for any loss or damage arising directly or indirectly from the use of this brochure. (This brochure is copyright 2009 and must not be reproduced in whole or in any part without prior written permission). N.B. Gas consumption figures relate to Natural Gas and are correct at time of going to press. BFM Europe Limited recommends that its fires be used in conjunction with central heating and not as a main source of heating.
