© Broseley Fires February 2013

Broseley Fires hold design copyright and registration of design for its product ranges. Broseley Fires are continually striving to improve and develop their range of products. It is important, therefore, to check details before ordering as sizes and specifications may change without prior notice.

Come into the warmth

Broseley. For your way of living.

Better make it Broseley

Broseley is named after the village in the heart of England where our business was born nearly fifty years ago. It's just across the historic Ironbridge over the Severn from Coalbrookdale where the 18th century ironmasters forged the Industrial Revolution – a fitting origin for a company that uses traditional skills and castings to craft stoves in stout cast iron that will stand the test of time.

They also stand the scientific tests required to meet the highest national and European standards of quality, safety and environmental performance. Our engineers make sure, using the latest analysers, calibrated fuels and instrumentation in our research and development laboratory. It's here they design the stoves themselves and the innovative features that help make Broseley the UK's favourite range of woodburning, electric and gas fuel stoves.

Broseley. For your way of living.

There is nothing you could add to your home that will make a more welcome difference than a **BROSELEY STOVE**.

Just the sight of the shimmering embers and bright flames will make you especially glad to be home. Then feel the warmth filling the room, and relax in style. Your Broseley stove provides more than a cosy centrepiece to your living space. Fashioned in cast iron, it is an object of singular beauty in itself.

Not only will it change your life, but fit in with your way of living. Whether your taste is contemporary, traditional or your own personal mixture; there's a stove to match from the Broseley collection. Nobody offers a wider choice of woodburning, electric or gas stoves exclusively in solid cast iron.

Each type of fuel has its special advantages in terms of convenience, efficiency, environmental quality and natural character. What they share is cast iron's timeless texture that enables your stove to make itself at home in town or country for generations.

Visitors will comment - "You've got a stove" But you'll know better than that. You've invested in a Broseley.

Broseley. For your way of living.

the woodburning way

What you see through the stove window is a natural fire and what you feel throughout the room is soft radiant heat from the cast iron. These stoves are the highest in heat output and green credentials in the Broseley range, and so efficient most are approved for use in Smoke Control Areas.

SERRANO 3 woodburning stove

the electric way

The cast iron stove in its most convenient form – that's the electric option. Summon up silent heat at the touch of a button; or simply enjoy the flickering, realistic fire effect for its own sake if the weather's warm or the central heating is on. There's no need for a flue. It can be installed instantly.

SERRANO 3 electric stove

the gas fired way

The gas fired range of stoves combine ease of control with enough output to heat a room very effectively thanks to the cast iron construction and the efficiency of the burners. And those flames you see coaxing the coals or logs into a blaze – they're real.

38-39

Better for the world out there

THE ENVIRONMENTAL CHOICE. That's what you make when you burn wood in a Broseley woodburning stove - *good for the planet as well as great for the home.*

NATURAL

RECYCLABLE

SUSTAINABLE

Not only is wood a renewable fuel, the CO² which wood emits when it burns is balanced by the CO² the tree has absorbed over its lifetime. This makes it carbon neutral.

As conventional fuel costs continue to rise and environmental regulations tighten, your Broseley woodburning stove will become an asset of ever increasing value. That's why as you relax in the rosy glow you can quietly pat yourself on the back for being both environmentally responsible and financially shrewd.

WOODBURNING

The big majority of us live in smoke control areas as defined by the Clean Air Acts. Here you can only use solid fuel heating appliances which have passed the tests set by the Department for Environment Food and Rural Affairs, DEFRA. So efficiently do Broseley stoves convert wood into heat, the majority bare the Smoke Exempt Seal (SE).

GAS AND ELECTRIC

Broseley gas fired stoves employ some of the most efficient gas engines in existence. We should know; we pioneered them. With a 5kW gas stove to heat a room there's no need to keep the central heating on, minimising household fuel consumption. Electricity is clean energy. But unlike any other fuel it's 100% efficient and you get the full benefit of every unit used.

Nothing stands for home as much as the hearth. It has always been so. The Romans had a word for it – focus. Your Broseley stove has a strength of character which draws people naturally together and tempts you to withdraw in well-deserved contentment.

The glass door of the stove presents an enticing flame picture in ever changing shades from deep red through orange to yellow - with the odd spark. If you think we're just talking about woodburning stoves, you need to witness the authenticity of electric and gas effects for yourself.

The appeal is sensual as well as visual. If warmth deserves to be described as beautiful, it's the kind which emanates from sturdy cast iron. This has a unique capacity to absorb heat from the fire within and radiate it gently from every surface evenly around the room. By comparison central heating feels unnatural. Both woodburning and gas fired stoves have this special power to satisfy.

...and your world in here

The pleasure of choosing...

Look There are a few things you really need to see at first hand and to touch in order to appreciate their true nature. A Broseley stove is one of them. That's why we recommend a visit to a local showroom belonging to a member of the Broseley Authorised Stockist national network. Here you can have the pleasure of examining and comparing these pieces of technology, understand how they work and picture how agreeably they might fit in with your lifestyle.

Listen A cast iron stove is probably a world apart from anything else you've ever bought. That's why it's important to get expert advice on which model is suitable for your home. Stoves range in power up to 10kW. A pre-sales visit will verify what's right for the room you have in mind. You'll also get to know the correct fuel to use, how to control its operation for warmth and economy and how to clean and care for your new prized possession.

Fit Both woodburning and gas fired stoves require a flue. It could be an existing chimney. But certain stoves are capable of being fitted against an outside wall. Installation is a specialist business. That's why we recommend using a HETAS approved or Gas Safe engineer who will assess whether any changes are needed to your fireplace or chimney before installation. If you want your stove to be up and running instantly, consider going electric. A socket is all you really need.

Relax Real flames bestowing a cosy ambience, but with over three times the heating efficiency of an open fire – that's the difference a Broseley woodburning or gas fired stove makes to a room. An electric stove will provide back-up warmth, and you can delight in the flame picture by itself. So what are you waiting for? Gather round.

the perfect stove

Enter a world of living warmth the **woodburning** way

GENEROUS, WELCOMING, ROMANTIC, AND BEAUTIFULLY DESIGNED – you’re sold on the dream of a life with a BROSELEY woodburning stove.

But how easy are they to run and live with? Operation is simple. A control regulates the air flowing through a front vent into the fire chamber. Open it to summon up a blaze. When you’re happy with the room temperature, you can close it to achieve any level of burn, down to a glimmering smoulder.

The secret of its efficiency is a system of ducts that direct different airflows around the interior. The primary air control directs air across the fire itself and around the back. The secondary air control above the glass sends down a pre-heated curtain of air to burn off any particles that could obscure the view. With this Airwash technology to keep it clean, you don’t have to bother to clean it yourself. That’s the brilliant part.

Most of our stoves are capable of burning either wood or smokeless fuel. Logs burn best on a flat surface, building up to a bed of embers, but smokeless fuel requires a current of air underneath. That’s achieved by operating a lever. Satisfied with the way these stoves perform? Now how will they look? Turn over and picture which of the collection will complement your lifestyle.

SERRANO 3

WOODBURNING STOVE

With its sleek matt surface and rounded lines, the SERRANO 3 makes itself comfortably at home in both contemporary settings and spaces with an eclectic mix of old and new. If you want to introduce the benefits of a woodburning stove to a smaller room, bring in SERRANO 3 with its heat output of 3kW. Its slim profile enables it to fit into shallower recesses; but make no mistake, weighing in at 100kg this is a high performance stove with an 81% efficiency rating.

SERRANO 5 SE

WOODBURNING STOVE

With an output of 5kW and the infinitely adaptable looks which characterise the whole Serrano range, the SERRANO 5 SE has the power to transform the look and feel of rooms in the size and style of house where most of us live. You can see why it's a favourite.

SERRANO 7 SE

WOODBURNING STOVE

Everything about the SERRANO 7 SE is expansive. Its hefty 7kW heat output will radiate warmth around every cubic metre of the largest spaces, making it especially welcome in rooms which are open plan or where a wall has been removed between two rooms to create a spacious living area. So panoramic is the flame picture through the arched window, you can revel in the ever changing display from any corner.

SERRANO 5 SE LOG STORE

WOODBURNING STOVE

The best way to appreciate what this tall new member of the Serrano family adds to home life is to sit back in front of it. Normally you look down into a stove's embers and fire bed, but because the SERRANO 5 SE with log store is raised you can see amazing wisps of flame flickering around the top of the interior. Endless fascination.

SERRANO 7 SE LOG STORE

WOODBURNING STOVE

The statement which the broad shouldered SERRANO 7 SE makes is all the more magnificent with the integral log store. It combines impact with convenience. Not only does its considerable capacity mean fewer trips to fetch wood from outside, the grain and growth rings on the cut ends of the logs and the pattern they form stacked together add a satisfyingly natural design element.

YORK MIDI SE

WOODBURNING STOVE

When you introduce the YORK MIDI SE into a room, you are adding an item of furniture that will stand comparison with some of your prized possessions. Witness the Regency legs and the architectural references around the top.

The difference with this piece of furniture is that it comes to life – bestowing light and warmth all around.

YORK GRANDE SE

WOODBURNING STOVE

As the name suggests, the YORK GRANDE SE has the power to circulate natural warmth around a good sized room. Yet it balances strength with elegance, thanks to those delightful embellishments cast into the iron. Raised on elegant legs, the York echoes traditional furniture.

WINCHESTER

WOODBURNING STOVE

The WINCHESTER is glorious whichever way you look at it. That's because in addition to the window commanding your gaze from the front, it also has windows faceted at an angle down either side. So even in the widest room no one sitting at an angle to the stove will be deprived of a comforting glimpse of firelight.

Its powerful presence is supported by a heat output approaching 9kW at an efficiency rate of 83%, one of the best around - one of the many reasons it's enormously popular.

SNOWDON 26 SE

WOODBURNING BOILER STOVE

The sturdy SNOWDON 26 SE has an imposing presence. With its double doors and greater width, it presents a wider expanse of blazing wood within an open hearth.

It can be easily integrated with either the unvented (combi boiler) system or the traditional vented system with water tanks. It will throw out 10kW worth of heat directly, enough for a room of considerable size, and contribute a full 16kW to a hot water system.

SNOWDON 30

WOODBURNING BOILER STOVE

The SNOWDON 30 is the most powerful stove in the range, and it has a mighty task to perform – not only to bathe even the largest room with warmth and glowing ambience, but to power the whole of a home's central heating and hot water system.

It fulfils its role magnificently. That's because within its solid cast iron structure is a steel wrap-around boiler which harnesses the extra available heat to distribute around your home, providing 8kW of heat into the room and 22kW into the hot water system.

How to add traditional values in an instant the **electric** way

When we first decided to power a cast iron stove with electricity, we had in mind people with a fireplace or space for a stove who desired that traditional look. But with total convenience.

With an electric stove there's no need for a flue. You can safely sit a stove directly on a carpet or wooden floor; the only installation required is plugging into a socket. It will convect 1kW or 2kW of heat into the room, thermostatically controlled for lasting comfort - enough to take the chill out while the central heating is warming up. You even have the option of enjoying the glow without the heat any time of year. It all happens in an instant. What sets Broseley electric stoves apart is their cast iron construction and the authenticity of the visual effect. We have perfected lighting technology to emulate the flames, the shimmer and smoulder of a real woodburning stove to the last detail. To get the effect just right, you can arrange a selection of the ceramic logs and real polished anthracite coals just as you please. Although indistinguishable in looks from their woodburning and gas cousins, their cast iron skins are thinner. This makes them portable around the house – living room, bedroom, kitchen, conservatory - wherever you fancy.

BROSELEY ELECTRIC STOVE OPTIONS

- ✓ Fitted as standard
- Option available

	FUEL EFFECT		HANDLES		DOOR INSERTS				FLUE SPIGOT

WINCHESTER	✓	✓	✓				✓		●
CANTERBURY	✓	✓	✓			●	●	✓	●
LINCOLN	✓	✓	✓		Double door design				●

Elgin and Hall Aurelia surround in Pearl Stone Micro Marble

YORK MIDI ELECTRIC STOVE

Stand the YORK MIDI electric stove beside its gas or woodburning twin and you won't see any difference. It even has an optional spigot for attaching a dummy flue pipe. Light them up and they're still amazingly challenging to distinguish - though admittedly the instant heat is something of a giveaway.

Another distinction is the door design. Woodburning stove doors all have plain glass, but with the YORK MIDI electric you can also opt for door inserts with latticework or gothic arch designs inspired by the Minster windows.

SERRANO 3

ELECTRIC STOVE

The compact size and timeless styling would tempt you to place the SERRANO 3 in the bedroom. In its electric version there's nothing to stop you. Plug in, switch it on and lie back to enjoy its restful, flickering ambience. Like all Broseley electric stoves, it's soothingly quiet. If tomorrow you fancy moving it to liven up the conservatory, that's your privilege.

WINCHESTER

ELECTRIC STOVE

With the artfully simulated flames visible from both left and right sides, the splendid WINCHESTER is just as much an all-round success in electric mode as woodburning or gas.

If you see an opportunity in a vacant corner or empty fireplace to make a bold statement, nothing could bring heat, light and sculptural dignity faster than the WINCHESTER.

CANTERBURY

ELECTRIC STOVE

Choose the CANTERBURY for amazing adaptability. That strong, classic look with subtle lines and pattern-work is just the start. It comes supplied with both hand-crafted ceramic logs and a bag of polished pieces of anthracite, one of the purest forms of carbon.

Arrange these how you will – all logs, all coals or a mixture. You also have a choice of door inserts: arched window (as standard), plain and arched lattice. To see the advantage, just switch on and observe how these patterns increase the impression of depth within. In fact, the CANTERBURY is slim in profile, enabling it to fit into shallow fireplaces - another side of its adaptability.

Elgin and Hall Colwyn surround in limestone

LINCOLN

ELECTRIC STOVE

The difference you notice right away is the centre-opening double doors with a traditional pattern. You can run the LINCOLN with them either closed or open for a change. You can also change the arrangement of the logs and coals. The LINCOLN is slimline to the extent of being only 10 inches (254mm) deep so it suits standard sized hearths and fireplaces. All of which could easily make it an open and closed choice.

Come home to real heat from real flames the **gas fired** way

Broseley started life as innovative gas engineers. Around 25 years ago we pioneered a gas engine of such neatness and efficiency, it became our first choice of fuel.

Whether arising from hand crafted ceramic fibre logs or coals, the flame picture is remarkably reminiscent of the real thing. The heat, is comparable in quality to the warmth radiating from our equivalent woodburning models. Although the output is slightly less, the extra convenience of gas more than compensates. Once the pilot is lit, the stove springs to life at your command. Thermostatic operation optimises fuel consumption; digital remote control gives you the freedom to change the view from blazing to smouldering and back.

Choose accurately to meet your needs, and you can find a stove that can fit into slim spaces, and work without a chimney using a neat balanced flue outlet to any outside wall. This is why the gas fired way could be the solution you've been seeking.

BROSELEY GAS STOVE OPTIONS	FUEL EFFECT		HANDLES	DOOR INSERTS				DIGITAL REMOTE CONTROL	BALANCED FLUE OPTION (with digital remote control)
	Coal	Log		Lattice	Arched Lattice	Plain	Arched Window		
YORK MIDI	✓		✓	✓	●	●	●	✓	
WINCHESTER	✓	●	✓			✓		✓	
CANTERBURY	✓		✓		●	●	✓		●
LINCOLN	✓		✓	Double door design					●

YORK MIDI

GAS STOVE

Manufactured in the traditional way but with Broseley advanced gas technology capable of a 4.6kW heat output, the YORK MIDI is the perfect choice for many rooms, whether for continuous or occasional use. It will obediently spring to life and suffuse the space with warmth in minutes.

WINCHESTER

GAS STOVE

Like its woodburning and electric counterparts, the noble WINCHESTER incorporates distinctive side windows so the beauty and warmth of the fire can be appreciated from all aspects of your living room. It also has the advantage of Broseley's own uniquely efficient gas engine to generate 5.5kW worth of warmth at 80% efficiency.

Digital remote control, choice of coal or log effect – what more do you need to make this obedient stove perfect for you in person.

CANTERBURY

GAS STOVE

Elegance crafted into cast iron, that's the CANTERBURY. Its exquisite detailing includes an embossed flame rising up the side and a choice of lattice or arched patterns under the wide curve of the window. Or you can opt for plain glass enabling you to enjoy the full panorama of flames dancing on coals. Today's housing interiors demand slimline appliances and the CANTERBURY complies beautifully. Its proportions allow it to sit happily on a standard sized hearth and radiate all the heat a typical room requires for comfort and joy.

If you don't have a conventional chimney in a room and yearn for the reassuring presence and glowing performance of a Broseley cast iron stove, the gas fired CANTERBURY with a balanced flue (which both admits air for ventilation and expels exhaust gases) is the answer. It allows it to be placed free-standing against any outside wall and flue through the wall in the same way as central heating. With its slimline shape it won't intrude into your space – be it living room, bedroom or conservatory - but simply transform it.

LINCOLN

GAS STOVE

The LINCOLN is distinctive for its double doors with Victorian detailing to frame the authentic flame picture. What will surprise you is that you can run the stove at full gas power with the doors open. Yet this is not an open fire.

For a slimline stove its 4.6kW output is more than adequate to heat a typical room. With the balanced flue version of the LINCOLN that could be most rooms in the house.

AFTERCARE

Annual servicing and chimney sweeping is a must for gas and woodburning stoves to keep them in top working order. Only ever clean the surface of your stove when it is cold, using a soft brush. A slightly damp lint-free cloth can be used for stubborn stains but ensure surfaces are dried immediately. Your stove's Metallic Black high temperature paint will lighten over time through natural ageing. You can re-paint or touch up your stove with a recommended paint from your stove retailer who can also supply any replacement parts and spares.

WARRANTY

Gas and Electric appliances carry a 12 month warranty which covers any manufacturing faults. It is important to note that a number of components in your stove are classed as consumable and therefore will need to be replaced from time to time (consumable parts include grates, firebricks and rope). Glass does not carry any form of warranty, this is because the glass can only break through mechanical impact.

BROSELEY STOCKISTS

All our dealers have showrooms where you can examine these beautiful pieces of technology and understand how they work and fit into your home. You'll receive expert advice on which model will fit your house and your needs best, how to control its operation for warmth and economy, and how to clean and care for your stove.

There are appointed stockists covering the whole of the UK, so you won't have to travel far to see how a Broseley stove can change your home life for the better. You can find your nearest stockist in the UK by using the Store Locator on our website (www.broseleyfires.com) or by contacting our sales office on 01743 461444.

** The flame pattern may vary on the Canterbury and Lincoln balanced flue models

Broseley. For your way of living.
